

The 2020 NHCPC Conference will feature five primary tracks supporting this year's theme: **2020 Vision: Coalitions Focused on the Future, Empowered by the Past**. By using our hindsight to inform the future, we can assess how our preparedness and response efforts have previously fallen short, and collectively create a renewed vision that allows us to anticipate, address and stabilize current gaps in the communities we've committed to protect. The NHCPC Program Advisory Committee is seeking abstracts which will empower coalitions to reach beyond the status quo to create and implement multi-disciplinary, cross-sector partnerships, and launch increased opportunities for innovative information sharing. Help inspire coalition leaders by sharing your success in the following tracks.

Track 1: Executive Coalition Leadership

The success of every coalition hinges on visionary leadership. This track focuses on anecdotal learnings from experienced coalition leaders. The shared expertise will help developing coalitions learn best practices, sustainability tactics and how to implement strategies for capacity building and growth.

Track 2: Expanding and Sustaining Coalitions

Coalitions are faced with ongoing challenges - shrinking budgets and resources, staff reductions, increasing workloads and the continual changing public health threats. This track will explore how coalitions are working to combat these challenges through specific case studies and key learnings.

Track 3: Emerging Threats

The nature of threats to our national health security continue to change significantly. None more clearly illustrated than the world-wide impact of COVID-19. Threats will continually evolve and, in order to protect our communities, coalitions are tasked with developing new and inspired solutions to address events like pandemic disease, the opioid crisis, active shooter emergencies and cybersecurity threats.

Track 4: Pediatrics

Children account for 25% of the population and are one of the country's greatest resources, as they are the future. Being that the needs of children varies drastically from that of adults during a crisis it is important to ensure that they are accounted for to truly be addressing the total population. This track will focus on pediatric planning and integration of pediatrics in to current plans.

Track 5: Resources, New Technologies and Tools to Share

With increased digital platforms, there is a strong need for improved health outcomes by state-of-the-art systems and cross-sector partnerships to access, analyze and act on data in timely, efficient and secure manners. This track will showcase efforts to collaborate, establish and enhance existing infrastructure while applying necessary skills to improve delivery of health services by getting data into the right hands, in the right format, at the right time.
